**European Factory Platform INDUSTREWEB**

Industreweb is a solution for data collection, presentation and dissemination. This is managed through a number of different tools within one product to give the ultimate flexibility to tailor-make solutions to your own environment. Whether you’re looking to help increase profits or just outline pitfalls in your factory.

**WHAT IS THE EFPF INDUSTREWEB?**

Industreweb is a platform to join rather than replace existing technologies. The key element is the ability to collect raw data from any real-world application and convert this into clean, usable data. However, this is only the tip of the ice-berg for this feature-rich product made for most industrial applications.

**WHAT IS AVAILABLE THROUGH EFPF INDUSTREWEB?**

Industreweb can offer a suite of tools bespoke to your needs. All these tools will ultimately work to increase OEE. The flexibility offered here allows you to tailor-make solutions to fit your own environment. Industreweb is a suite of tools that enable:

- **Data Collection**
- **Data Display**
- **Energy Monitoring** (energy monitoring to cut bills)
- **Consultancy and integration services**
- **Supply Chain Error Proofing**

**WHY CONNECTING TO EFPF INDUSTREWEB?**

Industreweb is a tool to drive efficiency, reduce waste and increase profits for your manufacturing business. This tool will allow you to discover shortfalls in your business and increase machine efficiency by measuring KPI’s such as OEE. Industreweb provides a wide range of data and information that will help your business succeed.

Unlike most software tools, Industreweb offers a multitude of tools that creates the „glue“ between systems that enables you to solve productivity and efficiency issues. Ultimately it’s your toolkit to capture data and solve problems.

If you’re looking to increase productivity in your business, then Industreweb can help. With informed businesses being able to make the best decisions for their future.
Industreweb enables you to connect your data to the EFPF ecosystem simply. Purchase an Industreweb node, and you can register it using the EFPF Admin tools. You can then start streaming the data you want to EFPF securely so that you can start to make use of the diverse range of tools available on EFPF. This can include Analytics and Machine learning, Risk Evaluation and Visualisation and Reporting Tools. Start your journey to using EFPF with Industreweb.

**WHAT ARE THE COSTS FOR USING THE EFPF INDUSTREWEB?**

Machine, a full production line, or plant-wide. The solution can be tailored to your needs. With a single node, Industreweb is cost-effective and flexible enough to grow with your requirements.

**HOW TO CONNECT TO EFPF INDUSTREWEB?**

Industreweb enables you to connect your data to the EFPF ecosystem simply. Purchase an Industreweb node, and you can register it using the EFPF Admin tools. You can then start streaming the data you want to EFPF securely so that you can start to make use of the diverse range of tools available on EFPF. This can include Analytics and Machine learning, Risk Evaluation and Visualisation and Reporting Tools. Start your journey to using EFPF with Industreweb.

- Capture data from common manufacturing data sources
- Monitor production / machine KPI’s
- Trigger actions based on key production events
- Make productivity gains by publishing data to EFPF Tools
